

Tomas Maly

Senior Mobile and Full Stack Engineer

Asheville, NC (Eastern) | tmaly1980@gmail.com | tmaly1980.github.io

Senior mobile and full stack engineer with **8+ years building production iOS and Android applications in React Native** and **3+ years of Swift/SwiftUI experience**, with **20+ years web and backend development experience**. Experienced in architecture, business-critical systems, legacy modernization, reliability, CI/CD, production support, and technical leadership across **field operations, logistics, and fitness/health/wellness products**. Brings **25+ years of software development experience** with full-stack breadth across mobile, web, APIs, databases, and cloud systems.

CORE EXPERTISE

WEB / MOBILE: React Native, Expo, Swift, SwiftUI, React Web, Next.js, TypeScript, Nest.js API, Node.js, REST APIs, Tailwind, NativeWind
DATABASE DESIGN: PostgreSQL, MySQL, SQL Server, Firebase, SQLite, TypeORM, schema design, realtime data, Auth/RLS
ARCHITECTURE: Multi-tenant architecture, offline-first architecture, modular application design, MVVM, MVC
DELIVERY & QUALITY: Automated unit & integration testing: Jest, XCTest; CI/CD, GitHub Actions, CircleCI, Fastlane, ESLint, Sentry, Crashlytics, Bugsnag, PostHog
TEAM & PROCESS: End-to-end product development, product/design/QA collaboration, Agile/Scrum, release planning, pair programming, mentoring developers
PLATFORMS: Vercel, Firebase, AWS (S3/SNS/Cognito), Azure DevOps, Google Cloud
INTEGRATIONS: Stripe/Connect, Google Maps, push notifications, Vision Camera/barcode scanning, OpenAI Vision

Sept 2025-Present: Self-Employed, Senior Mobile / Full-Stack Developer

Independent end-to-end development across mobile, web, backend, and database systems, with responsibility for architecture, implementation, integrations, deployment, app-store delivery, and production support.

React Native · Expo · Next.js · React · TypeScript · Nest.js · Node.js · Supabase · PostgreSQL · Stripe/Connect · OpenAI Vision · PostHog · Vercel · OpenStreetMap · Valhalla

MyIndiePro - Multi-Tenant Field-Service SaaS

- **Product mindset:** Architected a multi-tenant field-service SaaS around provider workflows, customer friction, feature scope, and expansion across multiple service industries.
- **Architecture & scalability:** Designed tenant isolation, reusable domain workflows, secure authorization boundaries, and independently deployable web/API layers.
- **Operational excellence:** Implemented centralized production logging with provider-level tagging so beta issues could be traced to the affected business, workflow, and application behavior.

APS Environmental Services - Field Operations / Environmental Services

- **Business-critical software:** Designed and delivered a field-service platform connecting customers, office staff, and mobile technicians across scheduling, field updates, photos/documents, notifications, and report delivery.
- **Reliability & resilience:** Architected secure multi-user workflows and realtime operational updates for mobile-first field usage across React Native and web interfaces.
- **End-to-end ownership:** Owned architecture, implementation, deployment, mobile distribution, and production support.

Meti Taxi - Rideshare Platform / Eastern European Markets

- **Complex technical challenges:** Architected configurable, wave-based driver matching using distance, performance, completion time, availability, and other operational factors.
- **Cost / performance engineering:** Made matching parameters runtime-configurable and built self-hosted Valhalla routing/ETA infrastructure with aggressive caching and geospatial optimization to reduce third-party API costs.
- **Realtime systems:** Built driver-liveness, heat-map, routing, and state-synchronization infrastructure for continuously changing mobile and location data.

LockAtlas + LockAtlas Technician - On-Demand Locksmith Marketplace / Field Operations

- **Product ownership:** Took an AI-assisted prototype to a production mobile marketplace, redesigning the architecture for customer/technician workflows, geographic matching, payments, AI-assisted estimating, and app-store distribution.
- **Marketplace architecture:** Designed reliable synchronization around technician radius, live job state, authorization boundaries, and changing order conditions across customer and technician applications.
- **Payments:** Implemented Stripe/Connect customer charges, technician payouts, and server-side payment workflows; integrated AI-assisted photo estimation using OpenAI Vision.

FitRoutine - Fitness Coaching / Wellness Management

- **Product logic:** Designed and implemented weekly scheduling algorithms generating personalized routines and goals across workouts, meals, habits, and meditation.
- **Product architecture:** Moved scheduling logic from the mobile app to the backend so routines could be triggered independently and customized week to week without a new app release.
- **Operational tooling:** Built an admin portal for nontechnical staff to manage workouts, exercises, meals, meditations, and habits; managed multiple App Store releases.

2018-2025: Xplor Technologies, Senior/Lead Mobile Developer

Worked across multiple mobile product teams, leading migrations, major releases, production stabilization, and handoffs to distributed engineering teams using mature Agile engineering practices.

React Native · Expo · Swift/SwiftUI · MVVM · REST APIs · Firebase · SQLite · SQL Server · TypeORM · MobX · React Navigation · Google Maps · Vision Camera · Jest · XCTest · Fastlane · AWS · Crashlytics · Bugsnag

Spot Delivery Connect Mobile - Pickup & Delivery / Field Operations

- **Business-critical software:** Led 4 developers migrating a core pickup-and-delivery platform used by hundreds of dry-cleaning businesses worldwide from Xamarin to React Native.
- **Reliability & resilience:** Designed the application offline-first because field connectivity was an operational risk, and implemented mandatory barcode verification before route departure to confirm route contents were complete and correct.
- **Legacy modernization & software craftsmanship:** Reverse engineered undocumented behavior while improving maintainability and release confidence through modular architecture, automated Jest testing, strict ESLint standards, code review, and QA collaboration.

TrueCoach - Fitness Coaching Platform

- **Technical leadership:** Led 4 developers through several major releases, collaborating with product, QA, and engineers while mentoring developers and reviewing technical work.
- **Software craftsmanship:** Implemented wearable-data integration and coach-client chat with XCTest automated testing and Bugsnag production diagnostics. App has 33K+ App Store ratings.

MarianaTek - Fitness Studio SaaS

- **Software craftsmanship:** Worked in a mature engineering environment emphasizing pair programming, automated XCTest coverage, maintainable architecture, and close design collaboration for pixel-precise UI.
- **Multi-tenant product development:** Contributed to a fitness studio booking, billing, and scheduling platform serving ~400 clients.

ZingFit - Fitness Studio / White-Label Mobile Platform

- **Complex technical challenges:** Architected CI/CD and release automation for hundreds of independently branded iOS and Android applications.
- **Operational excellence:** Built visibility into successful and failed deployments, owned mobile releases, and troubleshot push-notification failures across app configuration, AWS SNS, and client-specific release environments.

2000-2017: Various Employers, Web Developer

Full-stack web development across fintech, e-commerce, agritech, social media, nonprofit, and regional business platforms, spanning database design, responsive UI, payments, data import/export, deployment, optimization, and production support.

PHP · Laravel · CakePHP · MySQL · SQL Server · JavaScript · Vue.js · jQuery · Bootstrap · Microsoft Azure · Linux · Stripe · PayPal · Authorize.net · Git · MVC

MyTown USA - Regional Business / Events Platform

- Developed a local events and coupons platform for regional businesses, including scalable city-based content and business listings.

Central Valley Software / Grower Analytics - Agritech Analytics Platform

- Developed an agricultural analytics platform helping growers analyze crop yields, historical trends, and comparisons; optimized SQL Server data access in Microsoft Azure.
- Built XML, Excel/CSV, and JSON import/export workflows, responsive filtering and data visualization, and helped migrate legacy CakePHP functionality into Laravel.

Hopeful Press - Nonprofit / Fundraising Platform

- Built an adoption and fundraising portal for animal rescue organizations, including a custom CMS, listings, volunteer/adoption workflows, email notifications, and responsive administration tools.
- Implemented website customization plus Stripe/PayPal payment and donation processing, and handled remote Git-based deployment.

Harmony Designs - E-Commerce / Personalized Products

- Built and maintained a personalized-gifts ordering system with a live design-as-you-go product preview, integrating Authorize.net payments and dynamic image generation.
- Developed cross-browser ordering interfaces and worked on SEO, A/B testing, conversion optimization, shipping workflows, and web analytics.

Independent Web Development Projects

- Built independent applications including a fashion-oriented social media platform, a used-college-textbook ordering/exchange system, and telecommunications monitoring software for infrastructure troubleshooting.

Innovex Mortgage - Fintech / Mortgage Software

- Developed debt-analysis software used by loan agents to model debt consolidation and cash-out refinancing for homeowners, including financial calculations and user-facing workflows.
- Worked within a team of 4 developers and supported the PHP/MySQL application in a Linux environment.

EDUCATION

1998 - 2002: San Jose State University

Bachelor of Science, Computer Science
